# Assumptions for efficiency

## Assumption C (Piecewise polynomials, meshes, quadrature)

The approximation  $u_h^{k,i}$  is piecewise polynomial. The meshes  $\mathcal{T}_h$  are shape-regular. The quadrature error is negligible.

## Assumption D (Approximation property)

For all  $K \in \mathcal{T}_h$ , there holds

$$\|\sigma(u_h^{k,i}, \nabla u_h^{k,i}) + \mathbf{d}_h^{k,i}\|_{q,K} \leq C \left\{ \sum_{K' \in \mathfrak{T}_K} h_{K'}^q \|f + \nabla \cdot \sigma(u_h^{k,i}, \nabla u_h^{k,i})\|_{q,K'}^q \right. \\ \left. + \sum_{e \in \mathcal{E}_K^{\text{int}}} h_e \|[\sigma(u_h^{k,i}, \nabla u_h^{k,i}) \cdot \mathbf{n}_e]\|_{q,e}^q \right. \\ \left. + \sum_{e \in \mathcal{E}_K} h_e^{1-q} \|u_h^{k,i}\|_{q,e}^q \right\}^{\frac{1}{q}}.$$
